Directory servers hands-on
Identity Management Workshop

Victoriano Giralt

Central Computing Facility
University of Málaga, Spain

Chişinău, Replublic of Moldova
May, 15th 2007

Overview

1. **Rationale**
   - OpenLDAP basics
   - Fedora Directory Server basics
   - Deciding for one OpenSource Directory Server

Overview

OpenLDAP basics

OpenLDAP has served the community very well for a long time
It deserves respect

OpenLDAP basics

OpenLDAP has served the community very well for a long time
It deserves respect

- Fast and easy to setup

OpenLDAP basics

OpenLDAP has served the community very well for a long time
It deserves respect

- Fast and easy to setup
- Any Linux or BSD flavor has a working package

Rationale

FDS vs OLDAP

OpenLDAP basics

OpenLDAP has served the community very well for a long time
It deserves respect

- Fast and easy to setup
- Any Linux or BSD flavor has a working package

but . . .

OpenLDAP basics

OpenLDAP has served the community very well for a long time
It deserves respect

- Fast and easy to setup
- Any Linux or BSD flavor has a working package

but . . .

- Not the greatest performer

OpenLDAP basics

OpenLDAP has served the community very well for a long time
It deserves respect

- Fast and easy to setup
- Any Linux or BSD flavor has a working package

but . . .

- Not the greatest performer(flames > /dev/null)

OpenLDAP basics

OpenLDAP has served the community very well for a long time
It deserves respect

- Fast and easy to setup
- Any Linux or BSD flavor has a working package

but . . .

- Not the greatest performer(flames > /dev/null)
- Clumsy to administer

OpenLDAP basics

OpenLDAP has served the community very well for a long time
It deserves respect

- Fast and easy to setup
- Any Linux or BSD flavor has a working package

but . . .

- Not the greatest performer(flames > /dev/null)
- Clumsy to administer
  nearly every operation needs a server restart

OpenLDAP basics

OpenLDAP has served the community very well for a long time
It deserves respect

- Fast and easy to setup
- Any Linux or BSD flavor has a working package

but . . .

- Not the greatest performer(flames > /dev/null)
- Clumsy to administer
  nearly every operation needs a server restart
- No schema or ACI replication

OpenLDAP basics

OpenLDAP has served the community very well for a long time
It deserves respect

- Fast and easy to setup
- Any Linux or BSD flavor has a working package

but . . .

- Not the greatest performer(flames > /dev/null)
- Clumsy to administer
  nearly every operation needs a server restart
- No schema or ACI replication, an scalation nightmare

FDS basics

Though recently opensourced, it is hardly a newcomer

FDS basics

Though recently opensourced, it is hardly a newcomer

- Robust and very fast

Rationale

Installation of FDS

It seems not very difficult. The devil is in the details.

Installation of FDS

It seems not very difficult. The devil is in the details.

- Grab the packages from
  http://directory.fedoraproject.org/wiki/Download
- Install the packages
- Perform the postinstallation tasks
- Configure the database

Adjusting the schema
getting rid of uneeded materials

The excersise will consist of the following tasks

Rationale
Excersises
References

Installation
Schema fiddling
Replication

Adjusting the schema
getting rid of uneeded materials

The excersise will consist of the following tasks

- Find out where the schema files are
- Remove all of them
- Install new cleaner ones from CVS
- Add eduPerson, SCHAC and iris* schemas

Replica setup
the simple case

The excersise consists in setting up a read only replica
to one master provider, by performing the following tasks

Replica setup
the simple case

The excersise consists in setting up a read only replica
to one master provider, by performing the following tasks

- Define which server will take each role
- Find the appropiate documentation
- Follow the steps
- Test the setup
